HERD HEALTH

Our purebred & commercial cattle are on a full total herd health program.
As Calves at Birth: Vitamin A/D and Selenium/vitamin E, Toltrazuril 750mg
At Weaning: Bovi- Shield Gold One Shot, Ivomec and Ultrabac 7 with a booster 6 weeks later.
Pre-Breeding yearlings: Bovi- Shield Gold FP
Pre breeding cows: Bovi- Shield Gold FP5 annually and Ultrachoice 8 every second year.
Pre-Breeding heifers: Scourguard 4KC 2 doses 3 weeks apart with second dose 30 days pre calving.
Pre-Calving cows: Scourguard 4KC 3 weeks pre calving.
We feed a good quality custom mineral free choice year-round with Bovatec added in winter and through calving for coccidiosis prevention.

THE BRED COWS & BRED HEIFERS

All these young females were born on our ranch. They are what we considered to be the top end of a very large group of females. They are sifted & culled hard and even harder on drought years. The genetics behind them come from quality A.I. sires and careful selections we have made from top breeders. We have collected females from Red Round-Up, T Bar K dispersal, U2 dispersal, Diamond X dispersal, Red Moon Angus, Nine Mile Angus and others. We have used Red, Black and Black Red carrier genetics to create unique pedigrees and strengthen attributes.

HEIFER CALVES

We are offering two groups of heifer calves. One group to represent their mothers in the sale and one group from older dams that will spend their senior years with us on the ranch. These are the top heifer calves we have to offer; we haven't taken any out for ourselves. These calves have been raised on bush pasture with only their mothers' milk and native grasses- no creep. On October 29 they were vaccinated with Bovi-Sheild Gold One Shot, Ultrabac 7-Solmunac and Ivomec pour on.

BULL CALVES

This is a bit of a unconventional way to sell bulls. We wanted to give examples of bulls that come out of our program. Raised with no creep on native pasture. You can buy with confidence that we will stand behind any bull that doesn't prove to be a satisfactory breeder at 14 months. Vaccinated with Bovi-Sheild Gold One Shot and Ultrabac 7/ Solumnac and Ivomec on October 29, 2026

ABOUT US
ABOUT US

THE HENKEL CREEK STORY

In 1994 we purchased a small working ranch in the Colleymount area on the shores of beautiful Francois Lake B.C. The small February calving herd that came with the ranch consisted of Charolais & semi-cross cows with a Charolais herd bull and Red Angus heifer bull. The calving ease and vigor of the Angus calves impressed us right away. We worked in the forest industry to pay the bills as we raised our family and grew our commercial herd through the tough times of poor calf prices and BSE. In 2004 our affection for those hardy Angus calves and maternal Angus females that came out of our heifer breeding program influenced us to pursue a Red Angus Purebred Program. Finding good females that breeders were willing to part with proved to be very challenging. Through trial and error, we were able to slowly grow our purebred herd with females that had traits and characteristics that we desired. As we grew our purebred herd we decided to calve later when the weather was more favourable and raise two-year-old bulls that are developed slowly to become strong, mature, predictable breeders. We sell two-year-old bulls by private treaty and at the Vanderhoof All Breeds Bull Sale. Extra demand the last few years has seen us sell fourteen-month-old heifer type bulls in June. Despite several years of drought and our declining years creeping up on us we had an ambitious flush and A.I program planned for 2026 when a serious injury changed our reality. The difficult decision was made to reduce our herd by dispersing our younger purebreds while keeping a few older commercial and purebred cows so that our home is still a ranch.

1994
Ranch & Herd Purchased

2004
Red Angus Herd Established

2026
The Difficult Decision Was Made

WELCOME FROM **BOHRSON MARKETING SERVICES**

The kind of Angus cow Glen and Denise Stewart wanted to build at Henkel Creek was already earning her keep in their commercial herd. When they bought their ranch on the shores of Francois Lake, British Columbia, in 1994, it was the calving ease and vigour of their Angus calves and the females that went on to make good mother cows that caught their attention. Those cattle gave Glen and Denise a clear direction when they started their purebred Red Angus program in 2004. More than two decades later, you can see that same commercial sense in the young cows they're bringing to Olds.

We have a lot of respect for the way the Stewarts built this herd. They took their time finding the right females, buying from programs like U2, T Bar K, Diamond X, Red Moon and Nine Mile, and using AI to bring in genetics that complemented their cows. They've made good use of Red Angus and black red carrier genetics, giving buyers some interesting pedigrees to work with. Every bred cow and bred heifer in the sale was born at Henkel Creek. They represent the top end of a much larger group of females, and they come from a ranch where cows are sorted hard, especially when drought puts more pressure on the herd. That's the kind of selection we like to see behind a set of young cows.

The opportunity in this dispersal is the age and depth of the offering. There are bred heifers and cows from two to five years of age, giving buyers the chance to put together a group of females with much of their productive life ahead of them. We'd encourage you to study the cow families and look at the daughters alongside their dams where both are offered. You'll also find heifer calves out of older cows that will stay at the ranch, giving buyers access to families beyond the young cows in the sale. Glen and Denise haven't kept back any of their top heifer calves, and both the heifer and bull calves were raised on native pasture without creep feed. That gives you a good look at what the cows can raise under the conditions they work in every year.

The decision to part with these young cows was a difficult one for Glen and Denise. We appreciate their trust in our team and are proud to help them offer the cattle they've put so much of their lives into breeding. Whether you're looking for a single female to start a cow family or a group of young cows to build around, there's plenty of quality here to work with.

Please join us for the Henkel Creek Young Cow Total Dispersal at the BMS Sale Facility in Olds, Alberta, on Saturday, December 5, at 1:00 p.m. Come take a look through the cattle and visit with Glen and Denise about the cows behind them. If you can't make it, bidding will be available through DLMS, and any of us at BMS would be happy to talk through the offering and help with your selections.

A long, tall black, red carrier cow with a good udder. Her sire Rox Pokerface 20J is a powerful, good natured, perfect footed bull from a CAA elite dam. She was a dedicated mother to her 2026 calf.

Exposed to Rox Net Result 7N from June 26 to September 15. Preg checked, due mid April.

Over the last few years, we have purchased more than half a dozen bulls, two-year-olds and yearlings. All have had great temperament and were equipped to go to work covering females in dense bush over 3-4 thousand acres. The bulls met and exceeded our expectations. We enjoyed our interactions with Glen & Denise as well as answering all our questions and were shown sires, dams and related individuals when possible. Always a positive experience.

- Ken & Vickie Hill, Walter Reedy
HRH Ranch Ventures, Grassy Plains, B.C.

An excellent heifer or herd bull prospect. A 73lb. birth weight then 675lbs. on October 29. Raised on only grass and his mother's milk. This stylish dark red bull should produce strong growthy sons and daughters with exceptional maternal qualities.

ROX *Pokerface* 20J

Used to augment and promote the attributes of Red Moon Dyna Queen 23B our CAA elite dam. She will be 13 next spring and is still doing well. At 5 years old 20J moved on to a commercial herd, his feet were still flawless, and he was sound and fit. 20J has given us good calving ease with no assisted births. male calves avg. 85 lbs. and females 77 lbs.

ROX *Mission* 27M

Mission 27M is a black, red carrier bull that combines reliable U2 red bloodlines with a phenomenal black A.I. sire to produce a unique pedigree. His dam 270G is a very solid cow with a great udder that we chose as a heifer calf from the U2 dispersal sale. His qualities have been apparent at all stages of life. He has received lots of compliments from anyone who has seen him. Just a 78lb. birth weight then a 740lb. weaning weight with no creep on native pasture, the heaviest of a select group of bulls. His red or black, red carrier offspring should combine very desirable characteristics with distinctive pedigrees.

RED ROX *Jim* 2J

We used the well-known cow making A.I. bull Red Fine Line Mulberry 26P to enhance the established qualities of DXRL 6X. She was an attractive maternal gem. Culled for late calving at 14 years old, she still had a good udder and feet and looked years younger. 2J has given us good calving ease with no assisted births. male calves avg. 86 lbs. and females 77 lbs.

ROX *Net Result* 7N

The cow families behind this well-built bull give him exceptional genetic potential. His dam 70J is a really complete package, moderate build with a wonderful udder and good feet. A trouble-free cow that quietly goes about her business and gives us outstanding calves. A very good bull and strong doner cow family on his sire's side. Females from his mating should be fantastic and males should exhibit calving ease and terrific growth. 70lb. birth weight and 739lb. 205-day weight with only grass and mothers' milk-no creep.

RED ROX *Outcome* 65L

65L is big, powerful, dark red herd bull with good feet, large testicles and a calm demeaner. He is an A.I. son from our top pick of bred heifers at the T bar K dispersal sale. His dam is a very well-built cow with good feet and a very good udder. She is an embryo transfer daughter of the TK Rina 87X their stellar donner cow. We have bred 65L to purebred and commercial cows and have been very impressed with the results. All his calves have been easy unassisted births then grown extremely well. Male calves average 83lbs. Female calves average 82lbs. We think his striking, dark red, hairy calves will catch your eye in the sale pens.

SIRES *Reference*

We like to use home raised sires to build on established qualities in our herd. By using proven A.I. sires and cows with pedigrees that are unique to us we can further traits that we desire.
