# welcome

## TO OUR 2024 BULL SALE

On behalf of everyone here at Nordal, I would like to welcome everyone to our 29th Annual Bull Sale. When I think back to those very first sales all the work and effort into the haltering and tie breaking the bulls. Washing & blowing and tying the bulls in small pens sale day. Today the bulls are still raised in open country and grown out in big pens with lots of exercise. We have not changed our philosophy of the traits that are important. Calving ease, growth, maternal traits.

First off we must acknowledge a highlight from our 2023 year. The excitement of Justin and Josee's wedding this past July. Josee and her Dad JP, rode their horses up to the wedding site at Justin's (and now also Josee) farm in the hills. A picture perfect day for the celebration. About the bulls... Once again we present to you a selection of bulls that feature a combination of traits that highlight our selection of herd bulls. Our main focus to start is having sires that calve easy with calves that are vigorous at birth. The majority of our calving takes place in the fields and pasture setting so these are two important characteristics we strive for. The remaining factors are also what is practical and most importantly of economic benefit in the growth and performance of the progeny. We also want to see a female that has strong mothering capabilities and maternal traits. With these factors we have focused on lines that may excel in calving ease low birth weights or ones that show superior growth for heavier weaning weights. Maternal traits are also what one wants to see in that mother cow. We calve out a large group of cows and we do not have time to get a calf nursing to a mother that has udder issues. To look thru our offering we will have a bull red or black that will fill this criteria. There are ones that are built for straight calving ease, performance and muscle, maternal plus some that have a combination of many traits. In 2024 we have brought for a group of new herdsires that compliment the daughters of our past walking sires. Limousin features the new influence of the sire Handiwork. Muscle, shape and ruggedness best describes him while producing an acceptable birth weight. Only a small group of God's Country are on offer this year, his calving ease growth and great disposition are part of his package. On the Black Angus the top selling feature Sandy Bar Bronco rose to the top of our performance data with the frame length and growth he put in his sons. HA Colonel 9139 has a large group of sons that add the muscle and shape with big fertility traits to his offspring. Only one son sells of High Class but are excited for the potential this bloodline will infuse in our herd. Calving ease growth and structure will be a highlight of a very well balanced sire. On the Red Angus we have a solid set of calving ease focused sons of Common Sense. They are moderate in frame with the length and correctness consistently found in his progeny. Another sire that we have utilized for his different pedigree on our Red Angus is our sire Counselor 27G. He is a black red carrier that we have used with great success. His progeny feature a bit more performance and growth with solid carcass traits coming thru the influence of Counselor 5118. As in our past sales, for those who may not be able to take their purchase home sale day, we will return the bulls to the farm. The bulls will be delivered to their new homes when time and availability to an economical delivery period is set up. For bulls going greater distances we will keep the bulls until the necessary arrangements are made. If you require more information on the bulls, please contact us or any of the sales staff. The bulls will be available for viewing at the farm up to Feb. 19 and then at Saskatoon Livestock Sales in the big pens on the north side of sale facility. In closing we wish to thank all of our customers who have purchased bulls in the past and look forward to visiting with you about our bulls, our herd or the beef industry.

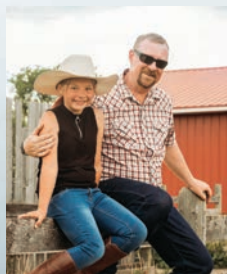

Thank you,  
*Robbie*

## SALE DAY PHONE... 306.382.8088

If you are unable to attend on sale day or would like to discuss anything about the bulls, give us a call or talk to any one of our sale staff.

**All two-year-old bulls** will have passed a satisfactory semen test prior to sale time and are fully guaranteed.

## DELIVERY

We will assist with delivery where ever possible. The bulls may be returned to the farm until arrangements can be made. We highly recommend insurance be placed on any bulls returning to the farm.

If we deliver, it will be at our timing to co-ordinate. As we also farm a sizeable amount of grain land, please advise us as to when you begin your breeding so we may schedule an appropriate delivery time.

	6	3.3	85	128	30	73	6

*Black Homozygous Polled*  
 Handiwork was a top seller in the 2021 Wulf Sale when we purchased this sale highlight. He has a stacked pedigree for growth and muscle. His progeny to date have proved this. He is a moderate calving sire with quick growth in his progeny. At the time of purchase he ranked in the top 2% for WW and YW, top 15% MILK, top 20% for Docility, Carcass Wt and Ribeye. He scanned an 18.8 ribeye. We are excited to continue watching his progeny mature. They have been a favorite sire group since birth. Handiwork now walks the pastures at High Cattle Co.

**GOD'S COUNTRY**

 GREENWOOD PLD TALKINDIRTY

EPDS	CE	BW	WW	YW	Milk	TM	CEM
	6	3.2	42	68	29	50	5

GC as we call him was a high selling purchase from Greenwood. GC is an absolute all around sire, great feet, length, big scrotal, super disposition. He calves easy with top growth characteristics. His son, Lot 11, is one of our pen favorites.

**HEADLINER**

**RS** *Limousin = Purebred*

	12	-1.7	67	95	24	58	9

Headline came as a top seller in the Symens 2021 sale. He was a sale feature and part of their 2021 Pen of 3. 105H is one of the longest sided bulls you will find. He has a big scrotal and displays a great disposition. You will see more of his progeny in the future.

# LIMOUSIN TWO YEAR OLD BULLS

**LOT 1:** Klondike 24K is one that we have admired since birth. He is complete in his make-up of a sound correct stature, very clean smooth head leading into a clean angular shoulder, solid top with a correct hip and leg structure. He is big in scrotal. The most important part of him is his highly proven dam. 24A's dam is a full sister to our former prominent sire Westmoreland 889X. The influence of the proven pedigree of Handiwork adds to Klondike's capabilities.

**Retaining ½ semen interest.** Klondike RGA 24K will have semen collected before delivery to new owners. We plan to use him extensively on our Purebred Limousin and also on our commercial herd. Note – twin with Lot 2. TWIN

**LOT 2:** Better yet, not one but two sons of Annie 24A by Handiwork. Kipper 124K is the same mold as his brother with a bit more hair. These two Handiwork sons are correct, thick and big scrotal. You make the decision on your pick. We think they are both outstanding. TWIN  
**Retaining ½ semen interest**

# LIMOUSIN TWO YEAR OLD BULLS

**LOT 3:** When we invested in Impact and Handiwork this is the type of animal I envisioned producing. As Jody simply put it, "this guy is pretty good". He stands on an outstanding foot, correct in his leg structure. He is smooth from end to end with lots of shape and depth. His dam is rising as one of our top producers. Here is a performance packed pedigree. We truly believe in the future of 429K. We plan on mating him both to our Purebred Limousin cows plus on select Red Angus cows for the red Lim-Flex influence.  
**Retaining ½ semen interest.**

Note the age of Kippen 987K. Remember 2021 was not kind. We had water issues resulting in some cows being later than expected. Saying that, it has not held this fellow back. He will come as one of the heaviest muscled, big testicled bulls of the group. A red Handiwork that traces back to one of our oldest Limousin cow families. With that in mind, our Limousin herd is on its 3rd cycle for the "K".

Kapital 43K is one we have debated about. Should we keep him to walk our own pastures or share his potential. We opted for the latter. To see his dam in production is nothing short of impressive with her udder structure and volume. He is a top-rated son of God's Country that is by none other than the great Zoom Bloom. Pedigree aside, Kapital 43K is moderate in frame that is perfect in his design from front to back. His clean front will add to his calving ease yet he maintains an abundance of volume, hip and an excellent foot structure. **Retaining 1/2 semen interest.**

Note the age of 882K. He follows the same as Lot 9 in the forgettable year of 2021. The natural muscle and style of this moderate framed son of our upcoming herd sire Headliner 105H will catch your eye. Not big in frame yet stout from top to bottom and end to end. Headliner 105H was a top seller in Symens 2021 sale and a member of their Pen of 3.

Bronco 43H came to us as the Lot 1 and top seller in the 2021 Short Grass Bull Sale. Touring the pens he stood out with his impeccable foot and leg structure. We were looking for a sire to use on our Payweight 6458 daughters and he has fit in nicely. His progeny are performance and growth oriented. Look for Bronco 43H to add frame and volume. His sons will be a feature sire group.

Colonel 9139 is a direct son of the highly proven Baldridge Colonel and the multi sire producing dam HA Ever Lady 1575. 9139 has one of the largest foot structures and ample heel on any Angus bull we have seen. His progeny are moderate in frame and packed full of muscle. He is an easy calving sire that has worked well on all types of cows. He ranks in the top 10% WW, 15% YW, top 1% Claw, top 15% Angle.

High Class is a young sire we are very excited about. He was a past high seller and attracted a lot of attention when he was out on display. He is a large framed bull with a gentle disposition. He is a direct son of the famed Showman sire. We have limited sons on offer this year. We used High Class successfully on our heifers and has now graduated to full cow herd duties.

# BLACK ANGUS TWO YEAR OLD BULLS

**LOT 20:** Bronco 550K comes as one of the top performance bulls of this group. His structure and frame are impressive. His dam is a Poss Element daughter. She is efficient in her low birth, sound foot structure and ideal udder design. We think 550K puts all the important traits together. He displays the reason we stepped up on Bronco 43H. Big foot, lots of heal and well placed leg. If you want to push for pounds on your calf crop here is a top candidate. Pay attention to his real numbers, they are among our very best.

We like the Emblazon 109X daughters as they just work well with any sire. Here is why, with another stout, correct made grandson of Emblazon 109X by our Colonel 9138 sire. This one is exceptional in his neck and shoulder leading back to a deep sided rib and flank. Calving ease is important to us as we calve the majority of the herd in big fields. The design of Colonel 172K is why we place so much emphasis on this type of sire.

Since coming on board as our main Red sire 308E has done a terrific job. His progeny are born easy with lots of vigour and growth. The best part of 308E is his foot and leg structure. Look up his progeny for their calving ease, low birth and dark red color. Although black, his best son, we think, sells as Lot 69.

We mated our pick of the Anderson heifers from the Angus Foundation Sale to Counsellor 5118. The result is the dam of 972K. Here again is a Common Sense 308E son. This fellow packs as muscle shape and style with added muscle. He is sharp in his profile and comes with a large scrotal. Note he is black with red genetics so he will sire red calves if your black cows also carry the red gene or will not sire black on red cows. Either way this fellow is easy to find in the pen with his standout physical characteristics.

## WHAT ARE EPDs?

Expected progeny differences (EPDs) are genetic selection tools that provide producers a measure of an animal's genetic merit for traits that are economically relevant to their operation. Basically, EPDs are a measure of how an animal's progeny can be expected to perform, on average.

An animal's genetics will contribute in part to how it performs. A portion of that performance is also dictated by the environment provided to that animal. The environment includes weather, disease, feed, stress, handling, vaccination protocols, maternal environment, housing, and the animal group dynamics. The environment differs for each herd as geography and producer management plays a large role in environment. EPDs remove the environment from all traits measured and provide producers with an estimate of the genetics that contribute towards each trait.

### EPDs are:

- A prediction of how an animal's progeny will perform
- A genetic selection tool
- Used to compare animals across different environments

### Genomics are:

- Used to parent verify animals for guaranteed pedigrees
- Used to calculate EPDs for animals that don't have a phenotype for a particular trait
- Used to calculate more accurate EPDs, especially for younger animals
- Used to calculate EPDs for new and expensive to measure traits, like High Immune Response

# UNDERSTANDING AND USING EPDs AND GENOMIC TECHNOLOGY

## HOW ARE EPDs CALCULATED?

EPDs describe how the progeny of an animal will perform for a specific trait. EPDs are calculated using pedigree information, individual performance information, progeny performance information, and genomic information.

The Canadian Angus Performance Program is based on whole herd reporting. Participants on the program are required to report complete cow herd inventory information (a calf or a fate or cull code for each cow in your inventory), and a birth weight and weaning weight on every calf. Complete contemporary group information is vital for the calculation of accurate EPDs. In addition, accurate management group recording is vital for the calculation of accurate EPDs. Members should place all calves that were managed the same way, and given the same opportunity to develop the trait being reported in one management group. Any calves treated differently, for example, any calves fed extra or calves that were sick should be placed in separate management groups.

## WHY IS EPD ACCURACY IMPORTANT?

EPDs should always be published with an estimate of accuracy. This informs producers of the amount of information available with which to calculate the EPD. P or P+ EPDs or estimates are low in accuracy. As more information becomes available, EPD accuracy will grow from 0 to 100%.

## USING EPDs

EPDs are comparative numbers. This means that the easiest way to use EPDs is to compare a bull's EPDs to another bull's EPDs. For example:

Bull A has a Yearling Weight EPD = 150 lbs  
Bull B has a Yearling Weight EPD = 100 lbs

On average Bull A's calves will weigh 50 lbs heavier than the average of Bull B's calves given the same cow herd and environment. Another way to use EPDs is to compare to the breed average. This is useful to producers who know the breed and what to expect in terms of performance from the breed. For example, the average calving ease for Canadian Angus genetics is very different from the average calving ease of other breeds. In Angus the average is a lot of calving ease!

## WHAT IS ANGUS GS?

Angus GS is a newer version of the Bovine 50K panel that we used to use. It's specifically designed for Angus genetics. It has all the same SNP markers that the 50K panel has on it, and more. There is a lot of value on genomic technology, specifically the Angus GS test.

Angus GS includes:

- SNP Parentage Verification
- Genetic condition test results are available for reduced fees than doing the test(s) individually
- Genomic percentile ranks
- GEEDs (more accurate genomically enhanced EPDs)

## WHAT ROLE DOES GENOMICS, AND THE ANGUS GS PANEL PLAY?

Genomic technology has been used to make EPDs more accurate. The genomic data increases the accuracy with which we relate animals to each other, verifying pedigree information, and allowing us to apply phenotypes of related animals to non-phenotyped animals.

Genotyping animals has led to more accurate EPDs for younger animals. Below are the progeny equivalents that come from the Angus GS panel. This means that doing the Angus GS test on an animal gives you as much information as having 23 calves with birth weights recorded and as many as 12 calves tested for individual feed intake.

**EPDs:** are a universal way of describing the genetic potential of progeny from breeding stock

**EPDs:** are a genetic selection tool that can help producers reach a breeding selection goal for their herd

**EPDs:** can help you maintain the traits that you want to keep in your herd

**EPDs:** can help you avoid traits that you might not wish to use on your cow herd and introduce into your herd

**EPDs:** are a great way to describe the high quality Canadian Angus genetics that you raise to your customers

**EPDs:** are the only fair way to compare breeding stock across herds and different environments

Trait	Progeny Equivalent	Trait	Progeny Equivalent
Calving Ease	26	Claw	10
Birth Weight	23	Fertility	17
Weaning Weight	27	MILK	36
Yearling Weight	23	Mature Weight	15
Dry Matter Intake	12	Marbling	11
Docility	12	Rib Eye Area	14
Feet	10	Teat and Udder	12
