EPDS: BW: 3.5 **WW:** 44 **YW:** 74.3 **M:** 24.4 **TM:** 46.4
SIRE: XTC 39D TRUMP 51J
DAM: DW MISS DOMINO 9121W LASS 62E

Another good son of 51J. Mother has another good one in yearling bull pen.

Welcome from F- R Ranch

We are extremely proud of our low maintenance, no nonsense, highly maternal cow herd. Excellent feet, udders, and calving ease are non-negotiable. Our program demands cattle who can really do it on their own. Cows calve in large fields in May/June and are seen once daily to record and process newborns. Assisting cows does not happen. If we don't start with an unassisted live calf, the other traits don't matter much. First calvers are kept somewhat handy on a half section field (typically only need to assist 2-3). Our death loss under this lack of management is usually 3%.

In years when we get average rain or better, our mature cows will often graze set aside grass and rented stubble for much of the winter, sometimes all winter. This year, with very good grass and a little early snow, our pairs stayed on grass until shortly before Christmas. Then we moved them home to wean. We did feed pairs during the cold snap. Once the weather improved, calves were weaned, and the cows were back on grass with protein supplement.

Since we quit AI, around 10 years ago, we've eliminated many surprises, and our overall cull rate has dropped significantly. We use our own bulls and buy from a select group of breeders with similar programs. We focus on using "spread" bulls, cattle with lower birth weights, yet still achieving good weaning and yearling gain performance.

Herd bulls were out August 5th in multi-sire groups. Offspring are DNA'd to parent verify. We do not do this until a few months prior to sale, so the bulls have earned their place in the sale. They're here on their own merit – not who they are, but what they are.

Our bulls are presented with a lot less feed than most sale bulls. Bulls can find a lot of ways to wreck themselves, and we don't figure we should help that out with overfeeding. These bulls were weaned in late November/December and very lightly backgrounded. We are not looking for much gain since they all go back to grass in May until late fall, when they are supplemented with hay until weaning is complete. The bulls were started on a mixed ration, which consisted of chopped hay and straw with enough alfalfa silage to reduce dust plus 8 lbs grain. Only 70 days on feed prior to sale. The bulls are not corralled and have plenty of room to do what they do – lots of exercise! All were given first fusogard shots for foot rot prevention and on a complete bova shield program. No feet trimmed, and no hair clipped.

Calving Ease Scores (these can vary a bit as it is simply our projection based on the information we have)

3-High level calving ease. Should work well on Angus based heifers and all aged cows.

2- Should calve easily but should maybe be used on heifers that have some supervision. Will work well on all aged cows.

1-A bit more birth weight or history of it. These bulls are best used on cows and expect no issues.

Feel free to call, text, email or stop by anytime.
