LORENZ ANGUS **Welcome**

Welcome to our 27th annual bull sale. We are experiencing exciting times in the beef business as of late and that should encourage us all to cull accordingly and clean up the pieces that don't fit or aren't earning their keep. The salvage value of both cows and bulls goes further now towards genetic improvement than it has in recent years, seedstock producers and commercial cattlemen alike, should take advantage of that. Quality has always reaped a premium, but now the figures are larger and the demand is greater, it is important that we take notice of that. We do not have an advantage of volume in the protein marketplace but we are in the driver seat when it comes to quality, and there is a consumer base that will continue to reward us if we continue to provide a premium product. Despite our market strength, the inflation in the world around us is evident, this should also impact our breeding decisions. Therefore, the industry is demanding low maintenance, efficient and quality bulls that sire daughters with the same attributes, if we are going to see a cowherd rebuild, and steers that are profitable for the people that make a living feeding them. We strive for cows that have maternal instinct and good udders with calves that are vigorous. A live calf of any size and quality is valuable right now; we need to wean as high of a percentage of a calf crop as possible. We also graze until well into December most years and need cows that can thrive in a lower maintenance environment but also produce enough pay weight on an annual basis. But beyond that we want quality, good fertility, phenotype, hair, muscle mass, capacity and carcass quality. We refuse to chase any single trait, but rather try to balance and combine as many of the traits listed above as possible, it is not the quickest path but we feel it is the correct direction.

We look forward to the visits regarding the offering in the coming few weeks and welcome all questions and visitors. The bulls will be semen tested, videoed and carcass ultrasounded by the middle of March and posted on DLMS.ca. Please join us for a complimentary steak dinner prior to the sale.

We look forward to hosting you on April 7th.

SIGHT UNSEEN Purchase Plan

If you are unable to attend the sale or simply would like to discuss the bulls that are most suitable to your operation, feel free to contact us prior to the sale. You know your program and we know ours, we've watched each of the bulls on offer develop since they were born and have extensive information on the many generations of cow families behind them, therefore together we can pick the most suitable breeding pieces for your program. If you cannot attend the sale, we will work on your behalf in a confidential, professional manner.

Badlands - Sire

Recommended for Heifers and Cows

This would be one of the real sale features. This bull pulled ahead of the pack at about 3 weeks of age and stayed out in front all summer, his 2-year-old dam did an excellent job, weaning him with an 843lb adjusted 205-day weight and a huge index of 121. She is excellent uddered, as is her 8-year-old mother and would be one of our nicest L model's and Resilient daughters. This bull is just as good in the flesh as he is on paper, good headed, attractive in his front and crest, level topped, clean sheathed and hairy.

Recommended for Heifers and Cows

Embryo transfer son of the 2C donor who has become one of the good cows in our program. She is youthful, with a good udder and strong foot quality, particularly for an 11-year-old cow. The flush to Badlands was a big one, resulting in 15 full siblings born in 2025 and 2026, consistently low birthweight with lots of hair and a good look. Not to take away from the bulls, but the sisters are going to be the strongest part of the flush and the pedigree reads very maternal, with longevity built in.

Recommended Cows

This is the feature Judgement son of the pen and his full brother was last year as well. 30J has become one of the best young cows here and is producing with the same potency that her donor dam, 6E does. This guy is good headed and masculine with a big forearm, lots of hip and center body mass. A really complete individual who stems from generations of our very best cows. Grandam and great grandam are both donors, great grandam was flushed several times this past summer as a 13 year old cow and will have feature progeny in our 2027 sale.

Recommended for Cows

Embryo transfer son of the herd bull producing 1Z cow. We dialed the calendar back a little bit when we decided to flush 1Z to Prowler, he was a bull we used about 13 years ago who left us a great set of daughters but also sired moderate birthweight sons that were sound with big testicles and did a lot of things right. One full brother was a feature who sold to HS Angus in last year's sale and we have calved several full sisters this winter, they have good udders with excellent maternal instinct. This guy has some extra stretch and lots of performance with an actual weight of 1360lbs on February 9.

Twin. This young Resilient daughter, who is perfectly uddered, had a set of twin Badlands bull calves last spring as just a 2-year-old and she nursed both of them until they were 6 weeks old and we were able to pull one off. Despite that she bred back to maintain a 382 day calving interval. Unfortunately, we lost the other twin a couple months after weaning when he laid in a hole and cast himself. They were both made identical, really easy doing and soft made with extra muscle for a heifer bull pedigree.

Heavy weaning weight calf off of a good footed, nice uddered 9-year-old cow. Grandam produced until she was 15 years old. This bull is level topped, long fronted, with exceptional hair and an 800lb adjusted weaning weight.

Not only was this bull pretty good from an early age, his 2-year-old mother is also very ideal in type and kind and udder quality and they were a fun pair to watch develop last summer. A calving ease bull with extra bone and a proud look.

Despite a little bigger actual birthweight, we think this bull will work well on heifers based on pedigree and his dam's history. At ten years of age, her sons have averaged 81lbs at birth. She is also a full sister to the 6E donor. His sire, Statement, was also used successfully on heifers for a couple years before being moved to cows.

Another 6E/National. This is the most modest birthweight of his brothers and a very complete, well-balanced individual. We have calved 7 full sisters now and will breed four more heifers from that flush this spring. They are excellent uddered, beautifully constructed females, definitely at the front end of their contemporaries.

Badlands - Sire

Recommended for Heifers and Cows

An outlier and curve bender from the 2C/Badlands flush, from a low birthweight like all of his siblings, to an impressive 823lb adjusted weaning weight and a continued growth curve to a 1465lb adjusted yearling weight which works out to a 4.01lb average daily gain between weaning and now, roughly 1lb/day more than the average of the pen. This powerhouse can be used on heifers or cows and you expect impressive performance.

The fourth and final full brother in this year's offering. Elite maternal qualities out of multigenerational donor cows along with extra dimension, hip and mass. We believe these 6E/Nationals are very user friendly, in the fact that they will make awesome replacement heifers, improve udder quality and sire stout, high quality sons.

Recommended for Cows

The youngest bull in the offering but a real feature. Since mid-summer this bull has walked with the big boys and kept right up. His mother has raised 3 sons and they have all been higher performing bulls and we are using one of them ourselves. 51J is a larger framed, excellent footed, power cow that we are happy to incorporate back into the program. Great performance numbers on this calf but he is better in real life than he is on paper. Wide pin set, big top, nice hip, long made, good headed and plenty masculine for his age. We think this will be one of the features to sell on April 7th.

LORENZ ANGUS Reference Sires

Ellingson Badlands 0285

A very complete calving ease sire that combines elite maternal qualities with functional traits that are essential at all levels of the industry. Badlands is good headed, strong footed and offers more base width and dimension than many highly predictable heifer bulls. He is out of a very influential cow that has raised multiple front end herd bulls, utilized across the industry. We are very excited to breed our first group of Badlands daughters and get them into production next year, as we feel they could be even better than their brothers.

Montana Judgement 1038

Judgement is an AI sire that we found while on a tour in Montana, we felt for a bull with his mass he was very complete, strong topped and agile. His dam is a broody cow with unmatched mass and rib shape that should add to the maternal merit of Judgement offspring. Both the male and female progeny are very easy doing and soft made with tons of center body capacity. We have calved about 15 daughters now; they are milking well and look productive at this point. As 2-year-olds they are moderate in frame and easy fleshing, it is our observation that Judgement has generally reduced teat size and improved or maintained foot quality in one generation.

Macnab Royalty 82L

Royalty was the high selling bull calf and our selection from the impressive Macnab Dispersal in the fall of 2024. He has an awesome Angus head with ample character, a wide muzzle and lots of masculinity. He is great haired, and has extra frame and length of body. He was an intelligent and aggressive breeder at only 13 months of age and has never looked back. We had about three daughters for every son born in his first calf crop, so the sampling in this year's offering is small and on the younger end of the group but we feel they are an exciting indication of what's to come. The 4 sons in the sale have already become fan favourites among visitors. Watch for Royalty sons to compose our largest sire group in 2027!
