WHO'S YOUR DADDY 2026 BULL & FEMALE SALE

Thursday, April 2, 2026 - 1:00pm
Saskatoon Livestock Sales - Saskatoon, SK
(5 miles west on Highway #14)

Welcome

Welcome to the 23rd Annual "Who's Your Daddy" Shorthorn bull sale. In this catalogue you will find 52 thick, easy fleshing Shorthorn bulls. These bulls represent the top cut from over 500 purebred Shorthorn females that are raised under commercial conditions. They are bred to go out and sire cattle that can survive and produce with a minimum of feed and labor, the two biggest costs facing our industry today.

If you have any questions about the offering or unable to attend the sale, feel free to contact the sales staff or consignor's and we will be happy to assist you. The bulls will be available for viewing Tuesday and Wednesday.

-Bull Sale Consignor's

Delivery: Free delivery to central locations within 300 miles of Saskatoon. Delivery over 300 miles at cost. \$100 off purchase price of your bull if you haul him home sale day. (Bull must be paid for in full in order to receive the discount).

U.S Buyers: We will guarantee that your bull will be eligible to export to the USA or we will refund your purchase price. For our American buyers the U.S. dollar enjoys a premium over the Canadian dollar. Exchange rate will be announced sale day.

Buyer Specific Bull Sale Service: If you are unable to attend the sale we would be more than happy to help select a bull to suit your needs. If you are not happy with the bull upon delivery, we'll load him up and take him home. If you are not happy, we aren't happy.

Buyers Option: Buyers may leave the bulls at the farm at their own risk until delivery. Bulls left at the farm must be insured.

Insurance: Will be available sale day.

BELL M FARMS

The Moellenbeck's, Englefeld, SK

Building Better Beef is what this industry is all about. Here at Bell M Farms, only 20% of our bull calves are retained as bulls. They are selected on size, quality, feet, legs, testicles, color and disposition. These bulls are grown out on a high roughage (straw), grain and a 32% beef supplement mixture along with a limited amount of hay. Remember grown out, not fattened. These bulls will be able to serve a large number of females for you to help Build Better Beef. As with all the bulls born at Bell M Farms, you have to be born unassisted to make the first hurdle to keep your nuts. Then we start looking at birth weight (they get weighed with a scale; No tape or eyeballing), structure, horns, color, performance, disposition, etc.

We have also taken the approach of 'if you can measure it, record it'. This is all in an attempt to provide you, our customer, the most information possible. We do things like weighing the cowherd, it's an interesting task as we are often asked 'what size is their mother'. Studies show a cow should easily have a calf 7% of their body weight. Thus, a 1500 lb cow should be able to deliver a 105 lb calf. We are more concerned about calving ease than birthweight. Our cows are also udder scored and recorded to the CSA Registry.

Every bull in this year's offering, we feel could be a herdsire here at Bell M Farms, we don't expect to sell you a bull if we would not feel comfortable using ourselves. Yes, this cuts down on quantity, but skyrockets the highest quality of Shorthorn Bulls you will find in Canada. We retain an in herd semen use on all bulls at our expense and the buyers convenience.

FS.	6.4

Possibly the most unique genetically made Shorthorn bull to sell this spring. Named after this years Grey Cup Champions, whom also won their first Championship in 1966, the same year Four Point Major was born. "Massive Major" was purchased by a group of ten Saskatchewan breeders in 1974 for the then record price of \$10,000 in Rothbury Dispersal at the age of 8. (worth \$66,800 in 2026) He was said to be one of the biggest Shorthorn bulls at the time and weighed 2,600 lbs. He was best known for producing excellent daughters.

Sally 57E is known for producing excellent bulls. She has a weaning production ratio of 120 over 7 calves and her dam with 106 over 6 calves. Roughrider is a Maternal brother to Kryptonite, Rocken and Felsen to name a few. Lots of performance here with a 720 lb weaning weight.

Very long bodied Foreman son that has been a favourite since birth. Ray Armbruster purchased his full brother Herdsmen 41L who we used via a.i. and are really impressed with his daughters. I suspect Palliser will do the same. Top 4% Stayability, weaning ratio of 110. Very complete deep sided bull that is soft made. Expect excellent daughters that will raise your next best calves.

MURIDALE SHORTHORNS

The Muri's, Swift Current, SK

Muridale Shorthorns is grateful for the many years we have been part of the Shorthorn breed. In 1927, we registered our first Shorthorns, marking the beginning of our journey. We are celebrating 99 years in the business. Over the decades, we have had the privilege of meeting many great people and forming lasting friendships.

Our breeding strategies is developing females that will calve and re-breed every year while raising high-performing calves year-in and year-out. These exceptional cows are also the dams of our bulls, which carry the genetics to sire functional cattle that work for you.

The bulls we are offering in the Who's Your Daddy Sale are genotyped and tested free for myostatin. Muridale Shorthorns retains in-herd semen rights on our bulls—at our expense and the buyer's convenience.

We welcome you to visit the farm to view our bulls. They will also be available for viewing in Saskatoon prior to the bull sale. Videos of the bulls can be found on our website: www.muridale.com/sales.html

One heck of a powerful bull, ranking in the top 15% of the breed for weaning weight and the top 10% for yearling weight, while still maintaining a strong Stayability EPD in the top 30% of the breed. He combines performance and longevity in a very balanced package. He exhibits tremendous length of body, a strong, well-shaped hip, and excellent depth of rib. His dam is sired by Muridale Robert 35U, a bull used widely across Canada for his calving ease and the positive maternal attributes consistently expressed in his daughters.

SASKVALLEY STOCK FARM

The Lehmann's, Rosthern, SK

Once again, we are bringing you a group of bulls that have been bred to perform on grass in the summer and a moderate growing ration in the winter. These bulls have never been pushed for maximum gain. As calves they ate only grass and their mother's milk, NO CREEP. After weaning in December they are fed a total mixed ration (TMR) designed with an energy level of 50 Mcal/cwt NEgain (For frame of reference, our heifer calves are fed a TMR with an energy level of 40 Mcal/cwt NEgain and expect them to gain 1.75 pounds per day. Most feedlots in western Canada feed a fattening ration that is 60 Mcal/cwt NEgain or more). They were turned out onto grass in May. During the summer as yearlings, while grazing grass, they received only salt and mineral supplementation. They did not receive any protein or energy supplements. In November they were taken off grass and once again fed a TMR with an energy level of 50 Mcal/cwt NEgain. We are trying to breed cattle that can survive and reproduce with a minimum amount of labor and feed. We do not sell any yearling bulls off the yard, so everyone has the opportunity to own the best 2 year old bulls that we raise.

5 years ago we started testing our yearling bulls for individual feed efficiency and residual feed intake (RFI). Researchers have proved feed efficiency to be a moderately heritable trait. The first 2 years the bulls were tested at Cattleland Feedyards in Strathmore Alberta. We now do the feed trials ourselves with our own feed bunks. We believe that reducing feed intake by 10% while at the same time maintaining performance is very achievable. Both independent research and the data we have generated with our own bulls substantiate this position.

Residual feed intake (RFI) is defined as the difference between an animal's actual feed intake and its expected feed requirements for maintenance and growth, and is used as a selection tool for selecting feed efficient animals, thus reducing feed costs. RFI is like a golf score, the more negative the better. Also note it is a contemporary group number. A bulls RFI can only be compared to other bulls in its contemporary group.

If you have any questions about feed efficiency or would like to see the set of data on the entire pen, please contact Barry.

All of our bulls are TH free. Myostatin and 100K results will be available by sale day. All of the bulls that we used last summer will be tested for trichomoniasis. Feel free to contact us about any information on the bulls. We would be happy to answer any questions that you may have. Videos of the bulls can be seen on our Facebook page. www.facebook.com/saskvalleyshorthorns/videos

— Denotes top 25% of the Shorthorn Breed EPD's.

REPLACEMENT FEMALES

We are offering a group of females that are from the heart of the heifer pen. They represent many of our top cow families. In many cases there are either full sisters or maternal sisters in the herd. Take these heifers home and breed them to the bull of your choice and reap for the profits.

EPDs

Calving Ease (CE) Listed as a percentage of unassisted calvings. A higher CED EPD predicts a sire that will have a higher percentage of unassisted calves.

Birth Weight (BW) At the basic level, birth weight is nothing more than an indicator trait for calving ease, but the emphasis on birth weight can be overdone. Economically, over selecting for low birth weights can take us in the wrong direction; cattle still sell by the pound. Use BW EPD in conjunction with calving ease. Phenotypic traits like length of body, shoulder design, head shape, circumference of bone and even frame score play a significant role in determining birth weights and calving ease.

Weaning Weights (WW) Put simply, weaning weight is the ability of a bull's calf to dry off, stagger to its feet, and grow like mad. Finding a sire with a strong WW that also excels in other economically relevant traits important to your breeding program is a key element to success.

Yearling Weight (YW) This trait is economically important since it is more indicative of growth potential through market weights taken early in the animal's life. Single trait selection for YW can lead to serious problems that can affect bottom line profit. Mature must be monitored when selecting a bull for performance via YW EPD. Cow maintenance costs, calving difficulty, and even breeding problems can result. YW EPDs can be very influential if you understand your environment conditions or if you are retaining ownership in your calves from birth to slaughter.

Milk (M) A bull's Milk EPD is determined by his daughter's ability to wean heavier calves than her contemporaries. Just because a cow weans a heavier calf each year does not necessarily mean her Milk EPD should be the highest in the herd. The performance of her calf can also be attributed to the dam's or sire's growth genetics or a number of environmental factors. Milk EPDs can be too high for your environmental conditions especially in severe environmental conditions and can have a negative impact on rebreeding rates.

\$Value Indexes

\$ CEZ – (\$ Calving Ease) This index assumes a bull will only be mated to heifers, not cows. The potential profitability of the sire is measured by the incidence of live calves at birth. Moderate mature size is also emphasized in the index, but performance is not a priority. This index is also a good measure of Shorthorn females' ability to produce calving ease sires. Overemphasis of \$CEZ may cause unwanted depression of weaning and yearling performance

\$BMI – (\$ British Maternal Index) As the name implies, this multi-trait selection index attempts to measure a bull's potential profitability when complimenting the British cow base (Angus, Red Angus, Hereford, etc.). Shorthorn females can likewise be gauged at adding value to British or British-composite bulls of other breeds. A balance of growth and carcass traits is desired with a strong maternal component aimed at optimum reproductive efficiency and cow longevity.

\$F – (\$ Feedlot) Similar to a Terminal Sire scenario, \$Feedlot places strong emphasis on growth and carcass traits. This multi-trait index assumes the sire will be mated to a mix of heifers and cows and attempts to measure profitability when progeny are sold on the fed market. On the female side, mature size should be monitored closely when selecting for \$F. Overselection may cause detrimental harm to longevity, reproductive efficiency, and fleshing ability.

Ultrasound Definitions

Ribeye Area (REA) Area of the longissimus muscle, measured in square inches. The trait is moderately to highly heritable and gives an indication of overall carcass muscling.

Fat Thickness (FT) An external fat measurement taken between the 12th and 13th ribs, measured in inches.

Rump Fat (RF) An external measurement taken between the hooks and pins, measured in inches. The rump fat and the rib fat measurements are used to determine the overall external body fat.

Intramuscular Fat (%IMF) Percentage of fat in the ribeye area muscle (similar to marbling). The field technician collects four images and the values generated by the interpreting software are averaged for an overall %IMF. Marbling directly contributes to beef palatability.

Lean Yield (LY) Percentage of muscle in the carcass.

Terms & Conditions

Location: The sale will be held at Saskatoon Livestock Sales (5 miles west of Saskatoon on Hwy 14).

Date & Time: Thursday April 2, 2026, 1:00pm CST

Air Travel: Saskatoon Airport is serviced by all major airlines, check with your travel agent for further details. We will be happy to look after you but please give us sufficient time if you require assistance.

Sale Day Phone: (306) 382-8088

Terms: Terms of the sale are cash or cheque, payable at par at the sale location. The right of property shall not pass until after settlement has been made; no invoicing on buyers in attendance, unless previous arrangements have been made. Every animal sells to the highest bidder and in cases of disputes, the auctioneer's decision will be final. Announcements from the auction block will take precedence over the information in the catalogue. All monies are in Canadian funds.

Mail, Phone or Wire Bids: Bidders unable to attend the sale may phone, wire or mail their bids and instructions to the sale manager, auctioneer or special representatives. Bids must be received in sufficient time prior to the sale.

Breeding Information: All cattle of breeding age are guaranteed to be breeders. All calthood vaccinates are noted in the catalogue. Any export tests will be arranged after the sale, at the seller's expense. The standard guarantee as endorsed by the Canadian Shorthorn Association will apply.

TH Status: All sale lots have been tested and are TH Free or declared TH Free by pedigree.

Pedigrees: The Canadian Shorthorn Association certificate of registration will be furnished with each animal sold, including calves by side of dam, duly transferred to the purchaser after payment has been made. Proper instructions must be provided at the conclusion of the sale. Extensions granted on order bids only. Costs incurred due to incorrect transfer will be borne by the purchaser.

Insurance: Agents will be in attendance to insure your purchases. We strongly recommend that insurance is purchased for full value.

Delivery: Every assistance will be given in arranging the shipping and delivery of your purchases. Each animal becomes the risk of the purchaser as soon as sold.

Errors: All announcements at sale time, written or oral, supersede any written material in the catalogue.

Liabilities: Who's Your Daddy, their consignors, sale staff and representatives accept no responsibility for any accidents that occur. All persons attend the sale at their own risk.
